

CHAMELEON

Electronic Medical Record

THE FINE DETAILS
AND THE BIG PICTURE

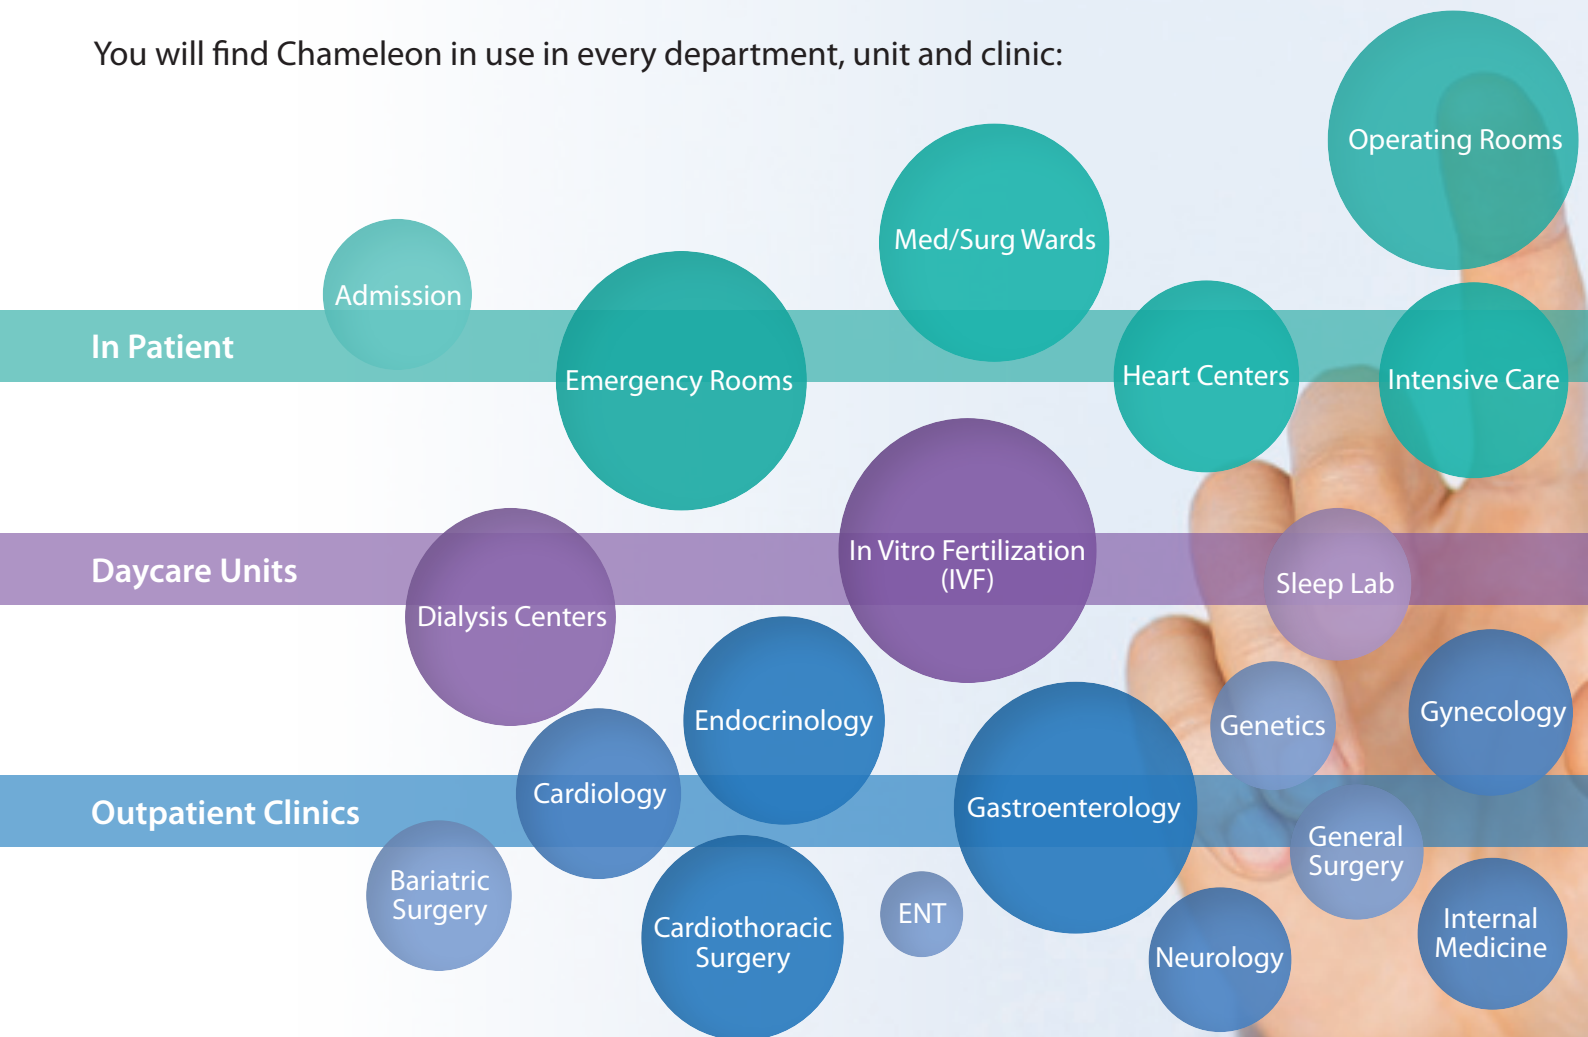

CHAMELEON

Chameleon is an Electronic Medical Record (EMR) system created to enable a wide range of medical institutions and departments to make the shift from paper to digital records, thereby providing a digitized horizontal perspective of hospitalization processes.

This wider picture allows for better resource management, more efficient administration and improved patient safety and clinical outcomes.

The Chameleon is designed for every type of institution across the medical industry, including: acute care hospitals, children's hospitals, ambulatory clinics, rehabilitation hospitals, geriatric and psychiatric medical centers and obstetrics.

You will find Chameleon in use in every department, unit and clinic:

Seamless Interoperability

By interfacing with the various hospital information systems, medical devices and labs, Chameleon compiles all relevant data into one interactive record; creating seamless documentation and simple interoperability, and allowing for improved decision making and more efficient process management.

The Building Blocks Of The Chameleon

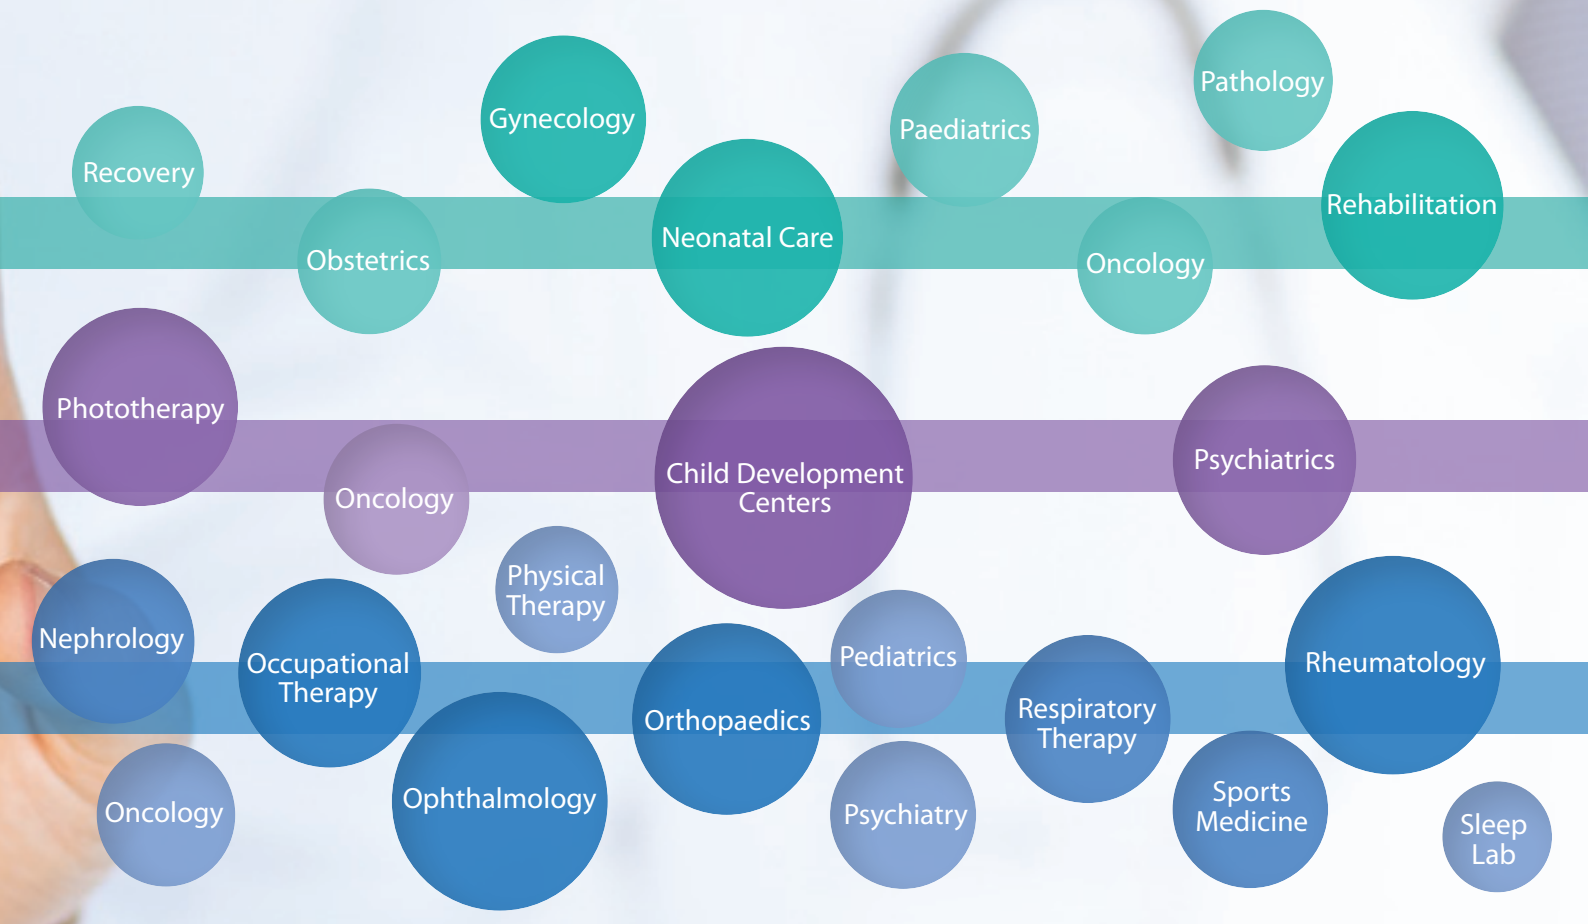

With a rich library of sophisticated preprogrammed system components, the Chameleon uses in-depth logic and advanced algorithms to create a seamless and holistic documentation process. With fully integrated system tasks, the Chameleon provides interoperability across departments, units and clinics. Together with advanced customization options, the system can also be tailored to specific medical institutions and processes.

Features

- Various viewpoints - patient, caregiver or organization.
- Automated data collection.
- Fully automated score calculations such as load and risk scores, balances etc.
- ePrescribing and CPOE using preset defaults and protocols and embedded safety guards.
- Automatically produced discharge notes, application letters etc.
- Standard coding systems for fast logging of diagnosis and procedures.
- Clinical Protocol Library provides guidelines for standardized medical practices.

Benefits

- Reduced human errors and increased patient safety.
- Increased medical staff efficiency.
- Improved clinical outcomes.
- Full medicolegal audit trail.
- Improved organizational processes and resource management.
- Maximization of reimbursement.

A Horizontal Perspective

Chameleon utilizes a single platform across all organizational departments, units and clinics and through the patient's entire medical history, showing all relevant information anywhere and anytime.

For the patients, this means their medical record follows them throughout their treatment process, improving patient safety and clinical outcomes; for the user, this means more efficient caregiving; and for the medical institution, this means improved organizational processes and resource utilization, as well as maximum reimbursement.

Implementation - On Time & On Budget

Over the years Elad Health has accumulated vast experience implementing large and complex EMR projects.

Chameleon's unique system structure ensures successful implementation, delivered **on schedule** and **within budget**.

The Sheba Medical Center (located in Israel, largest in the Middle East) implemented Chameleon in 60 clinical departments, 110 clinics, and the rehabilitation and children's hospitals - all in just 24 months. The Clalit HMO (second largest worldwide) has completed the implementation of Chameleon in all of its 12 hospitals.

Elad Health, part of the Elad Group, is the developer of the Chameleon™ Electronic Medical Record (EMR). The Chameleon provides a holistic horizontal view of hospitalization processes, and enables seamless interoperability across medical departments, units and clinics. Based on Elad Group's accumulated experience, Elad Health was established in 2003 as a niche health IT solution developer. Today the Chameleon is used by many thousands of healthcare providers in leading medical institutions, including: acute care hospitals, children's hospitals, ambulatory, rehabilitation, geriatric, psychiatric, labor and delivery wards and many others.

Partnering With The Best

In developing the Chameleon, Elad Health has integrated the very best technologies and platforms to create a holistic solution, perfectly suited to the needs of the medical industry.

We are proud to partner with:

 <p>For its user friendly applications and low maintenance costs</p>	 <p>For its integration platform</p>	 <p>For faster, safer decision-making</p>	 <p>For its medical device connectivity software</p>	 <p>For its Oncology therapy management</p>
